

“Our Enterprise Resource Planning product Go!, is a rock-steady solution which offers a nearly plug-and-play implementation and fits into small to mid-sized companies and budgets. OpenLayer provides a fresh, new, web browser based interface to compliment Go’s robust functionality. This add-on technology ushers our Go! product into the era of Web 2.0 where end users experience unparalleled flexibility. The addition of OpenLayer positions our Go! product very well in our very competitive market. It is like finding the missing piece of a very complicated puzzle”

Finding the Missing Piece Finding the Missing Piece

Dynamics Perspective is a premier Business Consulting and Solution Provider renowned for its Apparel and Textile industry experience. Dynamics Perspective has operated exclusively in the Fashion Industry since its inception with the mission to provide valuable services and strategic solutions to design, production and distribution companies in the industry.

This Fashion Industry has and always will be in a constant state of evolution with new challenges and new technologies; a dynamic which requires that business and technology become complements of each other instead of in opposition to each other as in earlier times. Dynamics Perspective, with its' over 30 years of experience, enables its clients to compete on a global scale with highly valued consulting services and globally known and acclaimed software solutions.

“Go!” - Enterprise Resource Planning - A rock-steady solution currently in use at over 75 companies across the US. This solution offers a nearly plug-and-play implementation and fits into small to mid-sized companies and budgets. “Go!” is developed using PRO-IV, a client-server development environment, which is a very fast development environment and scalable deployment. User interface is very rigid and restricted by server. It lacks flexible, open and extensible interface.

Before using OpenLayer from PROplus Systems, we were expecting huge development and deployment costs to provide an open, web browser based user interface to our application. We always had requests from our users to be able to remotely access the application as well as personalization and utilization of various mash ups available in the market place. As OpenLayer did not require any change in the application code or upgrade any of the underlying technologies, our risk of deploying “Go!” on the web is eliminated to ZERO.

By using OpenLayer as our front-end, we were “magically” able to transform our typical PRO-IV application to a web application.

OpenLayer provides the missing component of our otherwise proven and robust application. Our application now looks and feels like a standard web application. The possibilities of application enhancements are endless. It feels like we have found the missing piece of our application jigsaw puzzle.
