Business Partner
IBM®
Ready For
PureSystems

what makes us different

Zero Server Footprint
Zero footprint in Legacy Servers

No Application Changes
Legacy code remains unchanged while extending functionality and integrating with new technology

Zero Client Install
Accessible from any browser enabled device

Non-Disruptive
Installation and set-up doesn't affect existing business operations

empowering
your legacy system **with** OpenLayer™

OpenLayer delivers customers an innovative alternative to improving access and integration of Legacy platforms across their enterprise while reducing complexity, risk and cost and greatly improving time to market – without a change in Server.

3 in 1 solution that brings new functionality, features, and convenience to the legacy systems you already know and trust.

Ease of Use

Simple browser interface is common and understood by business users.

Instantly **access Legacy Systems Anytime / Anywhere** with any browser enabled device

Application and Database Agnostic

OpenLayer's architecture enables business knowledge transformation without changes to existing applications. Knowledge of technology stack is not necessary.

Personalize and extend the user experiences of different applications and **Integrate diversified applications** without the need to change your Legacy applications

Dynamic

OpenLayer quickly and easily adapts to any changes in your business applications

Preserves Existing Business Process

OpenLayer's innovative approach preserves your existing regulatory and compliance structures. (i.e. SOX)

Business Analyst level knowledge is required to use RESTful API interface to **orchestrate all your (Legacy and Cloud centric Modern) applications.**
